SUMMARY

Senior machine learning engineer building production AI systems at NAVER. Experience spans computer vision, multimodal thumbnail selection, automated sports highlights, real-time travel-time prediction, and LLM agents with retrieval-augmented generation.

SKILLS

ML & inference: Python, TensorFlow, PyTorch, TensorRT, NVIDIA Triton Inference Server, OpenCV, scikit-learn, computer vision, multimodal embeddings, aesthetic scoring, LangGraph, RAG.

Engineering & analytics: Scala, Rust, Go, MySQL, Spark, Airflow, NumPy, Pandas, clustering, regression, classification, statistical analysis, Tableau, Git, unit testing.

EXPERIENCE

NAVER Media AI | ML Engineer Aug 2025 - Present

- **BestCrop:** Developed computer vision models that identify the best image region for thumbnails, used across millions of NAVER content items daily and in Home Feed posts.
- **BestCut:** Combined CLIP-style image-text embeddings with aesthetic scoring to select visually appealing thumbnails relevant to a user post's title and content.
- **SPORTER:** Developed contextual AI models for automated clips and highlights for the 2026 World Cup, MSI, EWC, Asian Games 2026, and LoL Worlds 2026.

NAVER Maps, Car Navigation | ML Engineer Jan 2025 - Aug 2025

- Developed a road-scene object detection model with few-shot learning capabilities, achieving 95% mAP@50 across 104 labels.
- Built an LLM agent with LangGraph-style orchestration and RAG to automate customer feedback processing; automated 87% of feedback previously handled manually.

NAVER Maps, Public Transportation | Backend Engineer Jan 2024 - Dec 2024

- Modernized Tokio libraries and legacy Rust code, improving P99 latency by 20%; introduced a Rust unit-test framework and improved test-suite quality by 30%.
- Designed a multi-timetable binary-search algorithm that accelerated subway route searches by 5x.

NAVER Maps | Data Scientist Aug 2020 - Dec 2023

- Built NAVER Maps' first real-time deep learning model for car-route arrival times, improving MAPE by 3 percentage points over the prior heuristic; transportation ETA models improved MAPE by 2 percentage points.
- Developed Wi-Fi-based indoor positioning models for real-time user location in NAVER Maps' public transportation navigation service.

EDUCATION

Seoul National University Mar 2014 - Jul 2020

Bachelor of Computer Science | GPA: 3.77/4.3

SIDE PROJECTS

FFXIV Simhelper: DPS simulation tool used by hundreds of players. Designed reinforcement-learning logic, a Rust backend and a React frontend. Website | GitHub

Software Without Borders, Project 279: Volunteer data engineer. Designed a Google Cloud data-lake prototype to address Dropbox storage challenges for Brazilian environmental organization IPÊ.

LANGUAGES

Korean: Native | English: Fluent (TOEFL iBT 102/120)
